

About Quadrate

Quadrate is a software development company specializing in software tools that enable both end users and IT staff to work with SAP data. The software provides a user-friendly interface for data extraction and upload, allowing users to perform complex transactions without the need for programming or IT resources. It supports various data sources and offers flexible scheduling options for data uploads.

ERP² for SAP

ERP² for SAP is a powerful tool designed for end-users to handle complex transactions. It provides a cost-effective solution for immediate and scheduled data uploads, eliminating the need for programming or costly IT resources.

Qubed for SAP

Qubed for SAP is a professional-looking reporting tool. It is designed for users who need to generate reports and perform complex transactions. The software is easy to use and provides a professional appearance for the data presented.

Designed for the

INEXPERIENCED

ERP² Key Features

Simple 3 step process:

1. Record a transaction
2. Add data into template created
3. Upload data

Automatic Load File Generation

Upload data

Scheduled Execution

Upload at convenient times

Simple to understand error handling

Separates failed records

Respects SAP Security

Respects SAP security

Data Validation

Validates data

Additional Application Security

Apply additional restrictions to user

Broad Transaction Support

Upload to standard and custom transactions

Multiple File Formats

Upload from Excel or Access

Header / Detail Uploads

Easily upload transactions with variable number of data lines

Centralized Administration

Easily manage user rights centrally

Flexible Licensing

Various licensing models to suit your needs

Flexible Pricing

Pricing options to suit your budget

Template Editing

Modify existing templates - no need to re-record

Read Values

Read values from SAP while uploading

Data Manipulation

Easily manipulate and change your data dynamically

Transaction Stringing

Strings multiple transactions together that can be executed in one step rather than one by one

Even Rocket Scientists Need Help With SAP

Situation

Roke Manor Research develops communications and electronic systems for civil and military applications.

Prior to the decision to deploy ERP², there were several labour-intensive SAP applications in use at Roke Manor that were taking up a great deal of valuable time and money.

These included general ledger postings that entailed the uploading of large journals (400 plus lines) and making changes to HR master data (changing annual holiday entitlements), changing the depreciation life of a certain asset class.

Solution

As from July 2002, Roke Manor Research has been using ERP² in their SAP data transactions. Making changes to HR master data became a one-off task.

Similarly, utilising ERP² when changing the HR master data saved weeks of work, and creating the material master records became another one-off task which otherwise would have taken weeks.

Summary

Roke Manor Research has been delighted with the results. The costs and resources through using ERP² have boosted productivity and reduced costs.
